## **CURRENT STATE OF THE CONVERSION PROCESS**

### **REFERENCES**

All references in the former Publications database have been migrated to the new system. This information includes Yukon Geological Survey publications, as well as Geological Survey of Canada publications and various journal articles pertaining to the territory. We are in the process of going through these data to complete various new fields and remove duplication.

Discussions are underway with the EMR Library regarding migrating Assessment Report data to our system.

Migration of scanned collections, including the Faro files, will be undertaken in the near future.

### **OCCURRENCES**

All occurrences from Minfile and Placer have been migrated to the new system. We are in the process of going through both sets of data to complete various fields.

### **PROJECTS**

Current data in this module reflects Placer information captured upon migration. This module is undergoing work to 'clean' the data.

As new data are obtained they will be entered into this module.
